## THE BENEFITS

- \* Drastically reduced running costs
- \* Portable and easy-to-use
- \* Greatly enhanced performance compared to existing methods

## THE SMOKE

- \* Can travel through hundreds of metres of drains
- \* Dense, highly visible smoke with a distinct odour
- \* Water based, non-toxic and completely controllable

## THE DRAINMASTER

- \* Clean, simple and cost effective, with a **5 year parts warranty**
- \* Produces smoke on demand
- \* Can be used "off power" once pre-heated
- \* Uses re-sealable aerosols to produce up to 20 minutes of smoke

“...an invaluable tool for solving rodent and odour problems...”

## DRAINMASTER - The Ultimate Smoke Testing Solution

The Concept Drainmaster is a variant of the best selling Colt 4, it has a reinforced adapter capable of supporting heavy duty ducting.

The Drainmaster makes identifying leaks in drain work dramatically easier & cleaner. Potentially identifying leaks in minutes, that without the aid of high quality artificial smoke would take hours. Producing a persistent water-based non-toxic smoke. The smoke can travel through hundreds of metres of drains.

The unit runs off of the standard Colt 4 water based Aerosols which re-seal after use, so they can be used time and time again until exhausted.

Concept can also provide accessories such as drain bags, drain bags with 1" bore through tube, drain stoppers, pressure testing kits & smoke aerosol packs.

The Drainmaster allows you to operate off power (once pre-heated). Like the Colt 4, you can produce a large volume of smoke using the retained energy within the precision engineered heat exchanger. This allows the user to carry the smoke generator around, making smoke as required, without a trailing electrical lead. Once the unit has been pre-heated the Drainmaster will generate high quality smoke for around 2 minutes (continuous max output). When connected to the mains, the Drainmaster will operate continuously at maximum output.
